

Advanced Access To HTML Table Converter

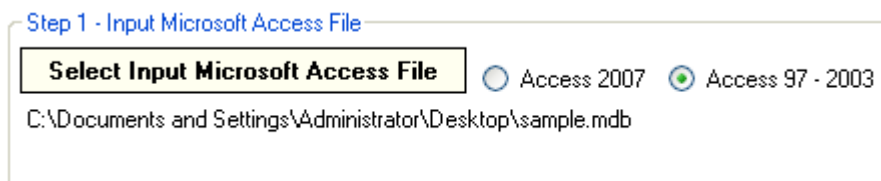

Product Information Page:

http://www.advancedreliablesoftware.com/advanced_access_to_html_table_converter.html

Advanced Access To HTML Table Converter is a utility that allows execution of SQL (Structured Query Language) queries on Microsoft Access database files. Resultsets returned by select SQL queries are automatically persisted as HTML and CSS table files to a directory of your choice.

Step 1 – Input Microsoft Access File

Select Microsoft Access version of your input database. Click the "Select Input Microsoft Access File" button and browse to your input database.

Step 1 - Input Microsoft Access File

Select Input Microsoft Access File Access 2007 Access 97 - 2003

C:\Documents and Settings\Administrator\Desktop\sample.mdb

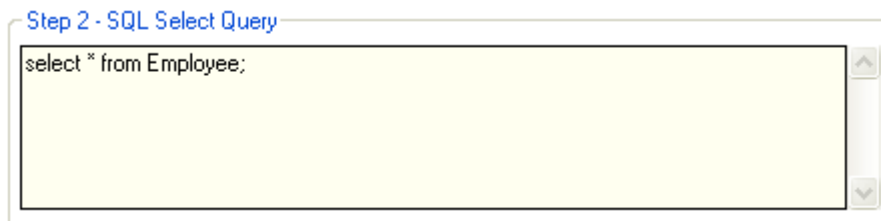

Step 2 – SQL Select Query

Enter your SQL select query. Enclose any column names that contain space character in "[", "]" brackets.

Examples:

Select all columns from table named "Employee".

select * from Employee;

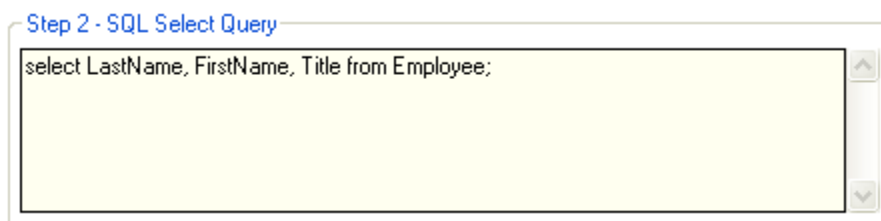

Step 2 - SQL Select Query

```
select * from Employee;
```

Select columns with column names "LastName", "FirstName", "Title" from table named "Employee".

select LastName, FirstName, Title from Employee;

Step 2 - SQL Select Query

```
select LastName, FirstName, Title from Employee;
```

Select columns with column names "Last Name", "First Name", "Title" from table named "Employee".

select [Last Name], [First Name], Title from Employee;

Step 2 - SQL Select Query

```
select [Last Name], [First Name], Title from Employee;
```

Step 3 (Optional) – Column Headers

Check the "Insert Column Headers" check box to include table column headers in your output HTML document. Define one header for each column in your SQL query. To add new column header enter desired information in the input field and click the "Add Column Header" button. To remove specific column header select it in the grid and click the "Remove Column Header" button.

Step 3 (Optional) - Column Headers

Insert Column Headers

Column Headers	
Last Name	
First Name	
Title	

Input field: _____

Add Column Header

Remove Column Header

Sample HTML output file table column headers:

Last Name	First Name	Title
Davolio	Nancy	Sales Representative
Fuller	Andrew	Vice President, Sales
Leverling	Janet	Sales Representative

Step 4 – Output Directory

Click the "..." button to assign output directory path. The application will automatically persist your most recently used output directory path for future reference.

Step 4 - Output Directory

... C:\Documents and Settings\Administrator\My Documents

Step 5 (Optional) – Output HTML File Name

Assign custom name for your HTML output file.

Step 5 (Optional) - Output HTML File Name

Output HTML File Name:

Step 6 – Execute SQL Query / Generate HTML Output

Click the “Execute SQL Query / Generate HTML Output” button to execute SQL query on your input file and generate an output HTML document. Your HTML output document will be created in the directory defined in Step 4.

Step 6 - Execute SQL Query / Generate HTML Output

Execute SQL Query / Generate HTML Output

Your query was saved to C:\Documents and Settings\Administrator\My Documents\client_contacts.html.

Sample HTML output:

Last Name	First Name	Title
Davolio	Nancy	Sales Representative
Fuller	Andrew	Vice President, Sales
Leverling	Janet	Sales Representative
